

30-SECOND EXECUTIVE PITCH

DÖR 2026: a *voluntary pilot* for diaspora visibility, renewal through young operators and stronger community autonomy.

DÖR 2026 is a living diaspora-relationship pilot. Its purpose is to make Hungarian communities abroad visible, reachable and operable as a Hungarian partner network with young contributors - while fully preserving their own autonomy. **It does not collect data about the diaspora; it builds living relationships with the diaspora:** events, community stories, young operators, cultural presence and local connection points become visible.

Important starting point: this is not a purely theoretical model. A small-scale Vienna experience has already provided operational evidence: events, community communication, youth involvement, online payment, volunteer work, institutional cooperation and visible Hungarian community presence worked in a real environment.

In 30 seconds: the first DÖR pilot shows how 10-20 diaspora organisations can be connected into one voluntary, visible Hungarian community space that can be operated with young contributors. The first operating elements are: **organisation profile, event calendar, Junior Hub connection and operating feedback.** The system does not appoint representatives, does not rank communities, does not distribute funding and does not collect political data.

WHICH PAIN DOES IT SOLVE?

Organisations are often invisible, overloaded, short of

WHAT IS THE FIRST PRODUCT?

Profile + event calendar + Junior Hub + basic

WHY IS IT DEFENSIBLE?

Voluntary, non-personalised, not ranking, not distributing

WHAT IS THE DECISION?

A factual Go / Modify / Stop decision after 90-120 days.

WHAT PROVES IT?

The operating principle already exists on a small scale, so the

PILOT CORE

SAFEGUARDS

EXECUTIVE INTERPRETATION

Two principles: *autonomy and living connection.*

Autonomy safeguard

DÖR does not appoint representatives, rank communities, distribute funding, penalise non-participation or collect political/worldview data. Participation is voluntary, reversible and does not affect the organisation's own operation.

Living diaspora relationship

DÖR does not collect data about the diaspora; it builds a living relationship with the diaspora by making active organisations, events, young operators, local knowledge and community stories visible.

Executive sentence: DÖR 2026 is designed to make Hungarian communities abroad visible as reachable, youth-operated partner networks while preserving their autonomy.

AUTONOMY CLAUSE

Not a system above communities, but a *voluntary operating infrastructure*.

Operating feedback, not state classification

Operating feedback is primarily a self-development tool for the organisation. The programme owner can only see aggregated operating signals for pilot evaluation.

No funding pre-filter

The pilot result cannot be used directly for funding decisions, withdrawal of support, political classification or community ranking.

No legitimacy decision

DÖR does not decide which organisation is the “real” Hungarian community in a city or country.

Final autonomy sentence: We do not control. We do not rank. We do not distribute funding. We do not decide legitimacy. We do not collect political data.

FOREIGN-RELATIONS VALUE

The diaspora should not be administered; it should be brought into *living relationship*.

Visible Hungarian presence

Organisational profiles, events, schools, clubs, cultural programmes and community stories

Youth connection points

The Junior Hub treats young people as operators, not as a passive target group: content, events, archives, interviews,

Cultural and community diplomacy

DÖR does not replace diplomatic missions, but helps identify active community nodes and

become searchable in one place.

translations and digital profiles.

organisations suitable for dialogue.

Summary sentence: DÖR 2026 is not designed to administer the diaspora, but to create living relationships with it.

01

The diaspora problem is not technological. It is a visibility, succession and operating problem.

The project is understandable only if every level is clear: who has the pain, why it hurts, and what DÖR solves.

PAIN 1 · COMMUNITY AUTONOMY

Organisations do not want top-down control.

Many diaspora communities are sensitive to systems that define from above who represents whom.

DÖR

Voluntary infrastructure, not top-down control.

The organisation decides on joining, its profile, delegate, exit and communication.

PAIN 2 · LIVING CONNECTION

Diaspora work is often invisible.

Events, stories and volunteer work often remain inside local channels.

DÖR

A shared digital space with local autonomy.

The pilot provides profiles, an event calendar and a community news layer without replacing existing channels.

02

The first 90-120 days prove one thing only: *does the minimum viable system work?*

The pilot is not the full DÖR, not a funding system, not a global database and not a business platform. It tests four basic functions with real communities.

1 · ORGANISATION PROFILE

Who the organisation is, where it operates, what channels it uses and who the contact person is.

2 · EVENT CALENDAR

At least one event or news item uploaded through a simple publishing process.

3 · JUNIOR HUB

A young editor is appointed, receives a mentored task list and portfolio confirmation.

4 · OPERATING REPORT

Not a score and not a ranking, but operating feedback at the end of the pilot.

What is not part of the first pilot?

No funding score

Operating feedback does not distribute money and does not rank communities.

No political data

No party preference, worldview, voting data or loyalty information.

No mandatory participation

Non-participating organisations may not suffer any disadvantage.

No global roll-out

Every continuation requires a separate decision.

No live business module

The Market Bridge can only be examined in a later validated phase.

No supplier lock-in

The technical structure must be documented, transferable and auditable.

03/A

Do not build a final state system first. *Prove the operating principle quickly.*

The goal is not to build a final global platform, but to prove whether organisations can manage their profiles, publish events, involve young editors and operate within controlled legal and financial frames.

100 editor access

At least one person per organisation can be trained.

Central money flow

Revenues may arrive on an auditable technical account separated by organisation codes.

Trained local owners

The operation does not depend on one person; local editor roles are created.

Transferable operation

The structure can be documented, trained and later transferred to mentored teams.

Budget slider

03

After 90-120 days, the decision should be *measurable, not impression-based*.

10-20

voluntary participating organisations

60%

upload at least one news item or event

15-30

Junior Hub participants

70%

leaders consider it useful

1

executive dashboard and closing report

0

data protection or political incidents

100%

voluntary participation and exit right

STOP

if the minimums are not met

04

What does each participant do after pilot launch?

ORGANISATION LEADER

- 1 Receives invitation.
- 2 Accepts the Autonomy Charter.
- 3 Profile is created.
- 4 Designates a contact and a young editor.

YOUNG PARTICIPANT

- 1 Joins the Junior Hub.
- 2 Receives a concrete task list.
- 3 Uploads event, article or archive material.
- 4 Receives mentored feedback.

PROGRAMME OWNER

- 1 Sees participating organisations.
- 2 Follows operating signals and risks.
- 3 Receives aggregated operating data.
- 4 Decides: Go, Modify or Stop.

05

DÖR is strong when it serves *autonomy and living connection* at the same time.

Autonomy and dialogue

The community is a partner, not a controlled actor.

Living diaspora relationship

Not a beneficiary list, but an operating community network.

Youth renewal

Young people are operators, not targets.

Government defensibility

Transparent, measurable, but not controlling.

05/B · EXPECTED PROFESSIONAL QUESTIONS

The difficult questions are answered through *built-in decision guarantees.*

DÖR 2026 does not create a new institution beside the existing ones. It adds a voluntary connection layer to already existing Hungarian community work, with data-protection and autonomy safeguards.

Fit with existing institutions

DÖR is not a parallel institution, but a visibility and connection layer. It does not take over the role of Hungarian institutes, organisations or government programmes; it makes existing work more searchable and easier to connect.

Aggregated feedback, not ranking

Operating feedback is not a funding ranking, not an evaluation system and not a political database. Only aggregated, purpose-bound feedback interpreting community operations may be used.

Wix as pilot environment

The Wix-based setup is not a final technological commitment, but a fast, low-risk demonstration environment. The 90-120 day test validates the operating model; after a successful pilot, the technology can be handed over, replaced or integrated into a more robust infrastructure.

Role of the ministry

The ministry's role is not an operational intervention layer, but professional observation, strategic evaluation and decision preparation. Local community autonomy and operational freedom remain intact.

Country-by-country legal adaptation

The Austrian pilot is not an automatic template. In other countries, the model may only be transferred after separate legal, data-protection, association-law and community adaptation.

Executive summary

DÖR is not a central intervention system, not a funding pre-filter and not a legitimacy decision point. It is a voluntary community visibility and collaboration model from which professional leadership can make a fact-based decision after 90-120 days.

Not a new foundation. A time-limited pilot programme accompanied by professional evaluation.

The most defensible model is not an operational ministry intervention layer, but a time-limited, auditable pilot-programme structure: programme office, programme evaluation board, diaspora roundtable, data-protection frame and a 90-120 day decision gate.

Recommended form: DÖR Pilot Programme Office + Programme Evaluation Board

Day-to-day implementation is coordinated by a small programme office, while a multi-stakeholder board evaluates the lessons and safeguards. The board includes professional, financial, strategic, technological and diaspora-delegate roles.

- ✓ It does not create a new asset-holding structure.
- ✓ It does not grant automatic exclusivity.
- ✓ It does not bypass public-finance control.
- ✓ Go / Modify / Stop decision after 90-120 days.

Professional evaluation logic

The ministry role is not operational intervention, but a decision-preparation safeguard: responsible owner, budget line, data-protection frame, decision gate and stop right.

VOLUNTARY

AUDIT

STOP POINT

NO POLITICAL DATA

Composition of the roundtable

MINISTERIAL PROFESSIONAL EVALUATION

Policy owner, designated responsible role and decision gates.

FINANCIAL CONTROL

Budget frame, itemised accounting and public pilot report.

STRATEGIC LEADERSHIP

Scope, metrics, scaling decision and risk management.

PROFESSIONAL LEADERSHIP

Diaspora methodology and community onboarding.

TECHNOLOGY TEAM

Architect, developers and data-security role.

DIASPORA DELEGATES

Designated representatives of participating organisations.

The pilot can only start if structural safeguards close the attack surfaces.

Public-finance firewall

No automatic extension, no automatic roll-out and no supplier privilege.

Data protection-political firewall

No political opinions, party preference, worldview data or loyalty information.

Voluntariness firewall

Non-participation may not cause any disadvantage.

Autonomy firewall

The platform does not decide legitimacy.

GO

Continue only with validated use, voluntary participation and clean audit.

MODIFY

Modify if there is value but scope, cost, data protection or governance need correction.

STOP

Stop if community value is not proven or risk cannot be closed.

The project is defensible when seven decision-making logics lead to the same conclusion: *small, measurable, clean, voluntary and stoppable*.

Transparency control

Who receives money, why, for how long and with what control?

Autonomy control

Will this become top-down diaspora control?

Living connection control

Does the diaspora receive an actual role?

Startup control

What is the smallest provable product?

Product / fintech control

Does it work for payments and permissions?

Reputation control

Could it look like an influence or data-collection system?

It does not start from theory. *There is an operating sample.*

The Vienna experience shows that a small team, community trust and digital structure can create measurable growth, multi-generational involvement and media-visible results.

Cost, staffing and timeline - expandable.

Wix base fee and pilot cost logic

The operating principle can be demonstrated in person.

The Vienna experience can be presented not only as a concept, but as operating logic, interface and pilot process.
